

Web- Project:

“Hospital Management System”

Group Members:

- Asjid Tahir 19p-0085
- Faiq Aslam 19p-0082

Project Overview:

We will create Hospital Management system, in which a patient come to hospital if he/she feel any sickness. Then he/she go to Reception to register his/her name, once he/she registered. He/she go to the consultant doctor, Doctor check him/her. In order to take tests of patient, the patient will be taken to the Lab for tests, and then after tests, the report sent to the Consultant Doctor. If needed Consultant doctor call the junior doctor to checkup the particular Patient. After that the Patient will be go to ward for further treatment and will be entertained by Nurse.

Features:

- Registration form for patients.
- Create Appointments.
- Doctor details.
- Patient details.

Tools:

Following are the tools that we used to implement:

- HTML.
- CSS.
- JavaScript.
- Php.
- Mysql.
- Xamp.
